

Exercise 26

Fill in the boxes on the diagram with the appropriate letter that describes the blood flow in the vessel indicated (letters can be used more than once).

- A** Going to the lungs
- B** Coming from the lungs
- C** Coming from the head
- D** Going to the body
- E** Coming from the body

HELP

Remember the position of the heart and that it fits tightly between the lungs, so think how the 'plumbing' is arranged.

Remember also that all the valves are one way, easy for the blood to push open in one direction but close in the other direction as the blood pushes against them.

● Total score out of a possible 7
